

REVAMPS AND UPGRADES

Process line productivity increase:
Replacement of a hydraulic shear for a heavy duty 7mm rotary shear.

Process line capacity increase: Replacement of the entry area to increase the yield strength and thicknesses processed.

Slitting head substitution projects. Replacement of slitting heads with slitter and tooling capstan and integration of tooling robots.

Project for increasing the productivity and personnel reduction.
Replacement of existing separator shafts with automatic separator shafts

Bundle and slit packaging line modifications for product possibilities or increasing productivity

Revamps of complete lines and electrical and automation upgrade.
